# TABLE OF CONTENTS

	PAGE
<b>Part I.—General Analysis of Manufacturing in the Dominion</b> .....	5
Section 1. Growth of Manufacturing in Canada.....	7
1. Historical Summary of Statistics of Manufactures for the Dominion, 1917-47.....	7
2. Summary Statistics of Manufactures, by Provinces, Significant Years, 1917-47.....	8
3. Summary Statistics of Manufactures, by Industrial Groups, Significant Years, 1917-47...	10
4. Summary of Statistics of Manufactures, Significant Years, 1917-47.....	12
5. Consumption of Manufactured Products, 1928-47.....	14
Section 2. Value and Volume of Manufactured Products.....	14
6. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923-46.....	16
7. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, Significant Years, 1923-46.....	17
Section 3. Production by Industrial Groups and Individual Industries.....	17
Subsection 1. Manufactures Grouped by Chief Component Materials.....	17
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-44.....	18
9. Statistics of the Numbers, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1947.....	20
Subsection 2. Manufactures Classified on the Standard Classification Basis.....	26
10. Principal Statistics of the Manufacturing Industries, 1945 to 1947, Classified on the Standard Classification Basis.....	26
11. Principal Statistics of Individual Manufacturing Industries, Classified on the Standard Classification Basis, 1947.....	27
Subsection 3. Manufactures Classified by the Purpose of the Products.....	31
12. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years, 1922-47 and in Detail for 1947.....	32
13. Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1947.....	34
Subsection 4. Manufactures Classified by Origin of the Materials.....	36
14. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Materials Used, by Main Groups, Significant Years, 1924-47.....	37
Subsection 5. Manufactures Classified by Type of Organization.....	39
15. Percentage Distribution of the Number of Establishments in the Manufacturing Industries, by Type of Organization, 1947.....	41
16. Percentage Distribution of Employment in the Manufacturing Industries, by Type of Organization, 1947.....	41
17. Percentage Distribution of Employment in the Forty Leading Industries, by Type of Organization, 1947.....	42
18. Principal Statistics of the Manufacturing Industries of Canada and Each Province, Grouped According to the Type of Organization, 1947.....	42
19. Principal Statistics of the Manufacturing Industries of Canada and Industrial Groups, Classified by Type of Organization, 1947.....	44
Subsection 6. Leading Manufacturing Industries.....	45
20. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1946.....	46
21. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1947.....	47
Section 4. Principal Factors in Manufacturing Production.....	48
Subsection 1. Capital Employed.....	48
22. Percentage Distribution of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, Significant Years, 1917-43.....	48
23. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1943, with Totals for Significant Years, 1924-42.....	49
Subsection 2. Employment in Manufactures.....	49
24. Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and Sex, Significant Years, 1922-47.....	50
25. Wage-Earners Employed in the Manufacturing Industries of Canada, by Months, Sex and Industrial Group, Significant Years, 1939-47.....	51
26. Wage-Earners in Manufacturing Working Specified Numbers of Hours per Week in the Month of Highest Employment, 1938-45.....	58
27. Wage-earners in Manufacturing Working Specified Numbers of Hours During the Last Week in November, 1946-47.....	59

# TABLE OF CONTENTS—concluded

	PAGE
<b>Part I.—General Analysis of Manufacturing in the Dominion—Concluded</b>	
Subsection 3. Salaries and Wages in Manufacturing Industries.....	59
28. Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1946, with Totals for Significant Years 1917-45.....	60
29. Salaries and Wages in the Forty Leading Industries, 1947, with Comparative Figures of Average Salaries and Wages Paid in 1946.....	61
30. Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada, 1934-47.....	63
31. Average Annual, Weekly and Hourly Earnings of All Wage-Earners in the Manufacturing Industries of Canada, by Provinces, 1938-47.....	64
32. Average Annual, Weekly and Hourly Earnings of All Wage-Earners in the Manufacturing Industries of Canada, by Industrial Groups, 1938-47.....	66
33. Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada, by Provinces, 1938-47.....	67
34. Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada, by Industrial Groups, 1938-47.....	69
35. Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-47.....	71
36. Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-47.....	72
Subsection 4. Size of Manufacturing Establishments.....	72
37. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1929, 1939, 1944 and 1947.....	73
38. Manufacturing Establishment Classified by Number of Employees, by Provinces, 1947.....	74
39. Establishment and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1929, 1939, 1944 and 1947.....	74
40. Percentage Importance of Establishments, Each Employing 200 or more Persons, in the Twenty-five Leading Industries, 1947.....	75
41. Principal Statistics of the Twenty-Five Leading Industries, Grouped According to Number of Employees per Establishment, 1947.....	75
Subsection 5. Power and Fuel.....	79
42. Power Equipment Installed in the Manufacturing Industries of Canada, 1931-46, with Details by Provinces and Industrial Groups, 1947.....	81
43. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1932-46, with Details by Provinces and Industrial Groups, 1947.....	82
<b>Part II.—Provincial and Local Distribution of Manufacturing Production.....</b>	84
1. Summary Statistics of Manufactures in Each Province, Classified by Industrial Groups, 1947.....	84
2. Concentration of Manufacturing Production in Each Province, 1947.....	87
3. Principal Statistics of the Manufacturing Industries of Canada and Each Province, Grouped According to the Number of Employees per Establishment, 1947.....	87
Section 1. The Manufactures of the Maritime Provinces, 1947.....	89
4. Statistics of the Leading Industries of the Maritime Provinces, 1947.....	89
Section 2. The Manufactures of Quebec, 1947.....	90
5. Statistics of the Leading Industries of the Province of Quebec, 1947.....	91
Section 3. The Manufactures of Ontario, 1947.....	92
6. Statistics of the Leading Industries of the Province of Ontario, 1947.....	93

List of Publications on the Census of Manufactures.....	166

# THE MANUFACTURING INDUSTRIES OF CANADA 1947

## Introduction

This report deals with manufacturing industries in Canada in two Parts. Part I gives general analyses including: the historical development of manufacturing; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital, employment, salaries and wages, size of establishment, and power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

Canada now ranks among the important manufacturing countries of the world, and holds a dominant position in the export of many manufactured products. The forward movement in development has been the result of three great influences: first, the opening of the west at the beginning of the present century which greatly increased the demand for manufactured goods of all kinds, especially construction materials; secondly, the First World War which left a permanent imprint upon the variety and efficiency of Canadian plants; and thirdly, the Second World War with its insatiable demands for food and manufactured products of all kinds. More especially during the Second World War the situation created as a result of Canada's strategic position as a source of food and armaments had far-reaching effects on the magnitude and diversification of Canadian manufacturing production, with the result that Canada, with greatly increased skills and plant capacity, has now entered a new era in manufacturing development.

The manufacturing industries of Canada in 1947 established a new record in gross value of production with a total of \$10,081,026,580. This represents an increase of \$2,045,334,109 or 26 p.c. over the previous year, and \$1,007,334,061 or 11 p.c. over the previous high attained in 1944. In terms of the actual physical output, however, the record is not so impressive. The increase of 26 p.c. in the gross value of production is accounted for in large part by an increase of 19 p.c. in the wholesale prices of fully and partly manufactured products, and only for about 6 or 7 p.c. by the actual increase in the physical volume of production.

Manufacturing establishments in 1947 numbered 32,714. They furnished employment to 1,131,750 persons who received \$2,085,925,966 in salaries and wages and produced goods with a selling value at the factory of \$10,081,026,580 from materials costing \$5,534,280,019. The value added by manufacture amounted to \$4,292,055,802.

From the point of view of employment which more closely reflects changes in the physical volume of production than any other factor, the non-ferrous metal products group with an increase of 13 p.c. reported the greatest increase in production. The wood and paper products group came second with an increase of 11 p.c., followed by the miscellaneous industries group with 10 p.c., non-metallic mineral products 8 p.c., textiles 7 p.c., iron and its products 6 p.c., vegetable products 5 p.c., and chemicals and allied products 3 p.c. The animal products group reported a minor decline of 1 p.c.

Of the forty leading industries in 1947, thirty-five reported increases and only five reported decreases in number of persons employed. The electrical apparatus industry with an increase of 8,738 employees recorded the greatest gain in production. This was followed by sawmills with an increase of 6,073, furniture 5,564, pulp and paper 4,979, cotton yarn and cloth 3,427, machinery 2,917, non-ferrous metal smelting and refining 2,903, primary iron and steel 2,737, automobiles 2,190, agricultural implements 2,147, automobile supplies 2,139, men's factory clothing 1,995, planing mills 1,862, printing and publishing 1,643, synthetic textiles and silk 1,628, hosiery and knitted goods 1,570, etc. The following industries reported decreases in number of employees: hardware, tools and cutlery 934, leather boots and shoes 901, slaughtering and meat packing 810, tobacco, cigars and cigarettes 161, and railway rolling-stock 27.

Percentage changes in manufacturing production of each province between 1944 and 1947 were as follows:—

Provinces	1947 Compared with 1944			1947 Compared with 1946		
	Number of Employees	Salaries and Wages	Gross Value of Products	Number of Employees	Salaries and Wages	Gross Value of Products
Prince Edward Island.....	+ 6.7	+14.3	+18.1	+ 8.6	+17.4	+13.0
Nova Scotia.....	-19.9	-23.1	- 0.1	+ 1.9	+ 7.1	+14.2
New Brunswick.....	+ 4.4	+22.4	+37.0	+ 6.4	+19.4	+22.0
Quebec.....	-10.5	- 0.8	+ 3.0	+ 6.2	+17.1	+20.8
Ontario.....	- 4.8	+ 6.5	+13.0	+ 7.9	+22.8	+30.6
Manitoba.....	- 3.8	+ 9.9	+ 8.7	+ 2.6	+13.0	+ 8.9
Saskatchewan.....	- 5.2	+11.1	+12.0	- 2.0	+ 9.5	+16.7
Alberta.....	+ 7.9	+24.1	+17.0	+ 5.7	+18.1	+15.2
British Columbia.....	-13.4	- 6.4	+30.9	+10.2	+21.7	+33.2
TOTALS.....	- 7.5	+ 2.8	+11.1	+ 7.0	+19.8	+25.5

## PART I.—GENERAL ANALYSES OF MANUFACTURING

## Section 1.—Growth of Manufacturing

## Subsection 1.—Production of Manufactured Products

This Section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5.

## 1.—Summary Statistics of Manufactures, 1917-47

NOTE.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in the 1942 editions of this report. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products <sup>1</sup>	Gross Value of Products
	No.	\$	No.	\$	\$	\$	\$
1917.....	21,845	2,333,991,229	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791

1946.....	31,249	8	1,058,156	1,740,687,254	4,358,234,766	3,467,004,980	8,035,692,471
1947.....	32,734	8	1,131,750	2,085,925,966	5,534,280,019	4,292,055,802	10,081,026,580

<sup>1</sup> For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. <sup>2</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

<sup>3</sup> Not collected.

## 2.—Summary Statistics of Manufactures, by Provinces, Significant Years, 1917-47

Province and Year	Estab-lish-ments	Capital	Em-ployees	Salaries and Wages	Cost of Materials	Net Value of Products <sup>1</sup>	Gross Value of Products

Averages, per wage-earner	76	92	174	174	203	227	217	226
	3-06	3-97	6-67	10-82	9-46	6-28	7-73	7-87

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

<sup>2</sup> Net values of products; see footnote 1, Table 1.

<sup>3</sup> Not collected.

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the past 30 years of development. In analysing statistics of production and materials used, price changes should be borne in mind particularly the inflation of values from 1914 through the immediate post-war period, the drop in prices of commodities during the depressions following 1921 and 1930, and the increase again in the recent war and post-war period. The figure that shows most clearly the trend of development is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 9,399,169 in 1947, an increase of about 346 p.c. in 30 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.28 in 1944; the increasing installation of power machinery and the decline in employment after the War resulted in a rise to 7.87 in 1947. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1945. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

### Subsection 2.—Consumption of Manufactured Products

One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1947 was \$9,884,536,356, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, textile, wood and paper, and animal were, in that order, the leading groups in the value of finished products made available for consumption in 1947. Vegetable, animal, wood and paper, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

On balance, Canada in the past imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The expansion of the iron and steel, chemical and non-ferrous metals industries will enable Canada to meet more of her requirements for home consumption and to export greater quantities in the future.

### 5.—Consumption of Manufactured Products, 1928-1947 and by Industrial Groups, 1947

Year	Value of Products Manufactured	Manufactured and Partly Manufactured Goods <sup>1</sup>		Value of Manufactured Products Available for Consumption
		Value of Net Imports	Value of Domestic Exports	
	\$	\$	\$	\$

<sup>1</sup> Figures for the years 1928-38 are for the fiscal years ended Mar. 31 of the following years; for 1939-47 they are for the calendar year. Net imports are total imports less foreign products re-exported.

## Section 2.—Value and Volume of Manufactured Products

**Value of Manufactured Products.**—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.4 in 1939 and 129.1 p.c. in 1947. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 117.4 p.c. in 1947.

**Volume of Manufacturing Production.**—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The indexes of volume (Table 6) are based on quantities of manufactured products reported and the industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products used were changed in 1931, 1936 and then again in 1941. By thus changing the construction of the index every five years, current changes in production are reflected more accurately.

The physical volume of manufacturing production increased 50 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1929-30, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports shows that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of expansion during the War, the physical volume of production in 1943, when production was at an all-time high, was 77 p.c. above 1939 and 85 p.c. above 1929. The chemical and allied products group, with an increase of 262 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of 222 p.c., non-ferrous metal products 130 p.c., miscellaneous industries 68 p.c., non-metallic mineral products 56 p.c., animal products 40 p.c., textiles and textile products 34 p.c., vegetable products 25 p.c., and wood and paper products 21 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 51 p.c., food 27 p.c. and clothing 25 p.c.

In 1946 the index of the physical volume of production at 150.3 represented a drop of 19.9 p.c. from the high mark attained in 1943. Chemicals and allied products had the sharpest decline of 65.2 p.c., followed by iron and its products with 44.7 p.c.; non-ferrous metal products 39.1 p.c.; miscellaneous industries 9.3 p.c.; and textiles and textile products 4.4 p.c. The wood and paper, vegetable, non-metallic mineral and animal products groups on the other hand reported an increase in the volume of production. The volume of consumer goods continued to rise with the books and stationery group reporting an increase of 28.3 p.c., followed by drink and tobacco with 26.3 p.c., personal utilities 25.4 p.c., house furnishings 15.8 p.c., food 11.9 p.c. and clothing 5.0 p.c. Industrial equipment and producers materials were both down with declines of 25.7 and 15.1 p.c. respectively. Vehicles and vessels had the greatest decline of 52.1 p.c.

The index for 1947 has not yet been compiled. This will be done as soon as the indexes for 1940 to 1946 have been revised in accordance with supplementary information now available.

# 6.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923-46

(1935-39=100)

NOTE.—The indexes for 1940 to 1946 are being revised in the light of supplementary information now available.

## Section 3.—Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail and in the historical series shown in Table 3. However, there are also less detailed analyses given under the standard classification grouping in Tables 10 and 11, the purpose grouping in Table 12 and origin grouping in Table 13.

### Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of

central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

**Recent Changes in Manufacturing Production.**—Table 8 shows the the recovery after the depression and the impact of the Second World War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which shows changes in volume of production. Compared with 1939, the number of employees in 1944 increased by 86 p.c. as compared with an increase of 70 p.c. in the physical volume of production. Salaries and wages paid were 175 p.c. higher and the gross value of production 161 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1944 this figure jumped to 403.

**8.—Percentage Variations in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, Compared for Significant Years, 1933-47**

Industrial Group	1939 Compared with 1933			1944 Compared with 1939		
	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts

Significant changes in the nature of manufacturing production took place after the cessation of hostilities in 1945. Industries engaged in war production operated at a substantially lower level, while industries producing consumer goods stepped up their production. From the point of view of employment the chemical

and allied products group with a drop of 53 p.c. experienced the greatest decline in production between 1944 and 1947. Iron and its products was second with a drop of 36 p.c., followed by non-ferrous metal products with 8 p.c. and miscellaneous industries 8 p.c. The wood and paper products group reported the greatest gain with an increase in employment of 31 p.c., followed by non-metallic mineral products with 24 p.c., textiles 15 p.c., vegetable products 10 p.c. and animal products 8 p.c. For manufacturing as a whole there was a drop of 8 p.c. in the number of employees with an increase of 3 p.c. in the amount of salaries and wages paid. Although there was a drop in the physical volume of production the gross value of products made was 11 p.c. higher. This was due to the rise in the wholesale prices of fully and partly manufactured products.

**Detailed Statistics by Groups and Individual Industries.**—Table 9 presents for the year 1947 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example, the value of production of the confectionery industry amounting to \$76,854,863 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product was confectionery, had a value of production of \$76,854,863. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as ice cream which was valued at \$2,198,713, and bread and other bakery products valued at \$2,254,057. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. For total production figures of individual products, reference should be made to "The Alphabetical List of Products" published annually as Appendix II to this report.

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War and the conversion to peace-time production on any industry, it is necessary to compare the nature of the products made before and during the War with that of the present. This should be borne in mind in making industrial comparisons of the war years and the present. For example, the number of employees engaged in the agricultural implements industry increased by 8,248 between 1939 and 1945; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

### Subsection 2.—Manufactures Classified on the Standard Classification Basis

To provide information of maximum usefulness and to allow for a direct comparison of statistics, collected by many government departments and agencies, an interdepartmental committee was set up in 1945 to review the different systems of classification in use and to recommend a standard classification to be used by all government departments in their statistical compilations.

Tables 10 and 11 give statistics for 1945 to 1947 of the manufacturing industries on the standard classification basis recommended by the committee. This classification conforms in large measure to that now recommended by the United Nations Statistical Commission.

#### 10.—Principal Statistics of Manufacturing Industries, Classified on the Standard Classification Basis, 1945-47

Year and Group	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products	Gross Value of Products
	No.	No.	\$	\$	\$	\$
<b>1945</b>						
Food and beverages.....	8,872	156,396	224,908,882	1,336,820,028	558,247,045	1,921,774,601

## Subsection 3.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1933 in the type and variety of Canadian manufacturing production. On the basis of the percentage of gross value of production, the most striking change is shown by the food group which fell from 25·2 p.c. of the total in 1933 to 21·2 p.c. in 1939 and 21·2 p.c. in 1947. Another change which emphasizes the greater industrialization of Canada since the war is shown by the increase in the proportion of the producers materials group which rose from 29·4 p.c. in 1933 to 33·2 p.c. in 1947. The industrial equipment group which more than any other factor reflects the increased tempo of manufacturing production also rose from 14·2 p.c. in 1933 to 17·0 p.c. in 1947. There were also increases in the proportion of vehicles and vessels and house furnishings. Declines were reported by the clothing, drink and tobacco, personal equipment and books and stationery groups.

**12.—Principal Statistics of Manufacturing Industries, Classified According to Purpose of Principal Product, by Main Groups, Significant Years 1922-47 and in Detail for 1947.**

<sup>1</sup> For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Table 13 gives the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. Commodities produced in small quantities are not included but the list covers approximately 75 p.c. of total production. For a complete list of products, see Appendix II of this report.

#### Subsection 4. —Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those

depending upon materials that cannot be grown in Canada, such as tea, coffee spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1943, at the maximum of the war effort, had by far the greatest capital investment, employed the largest number of persons, and paid out the highest amount in salaries and wages. In 1943 the average capital per employee amounted to \$5,441 for the mineral group as compared with \$4,417 for the farm origin group. The mineral group also pays the highest wages. In 1947 the average salary and wage was \$2,092 for the mineral group and \$1,621 for the farm origin group.

#### 14.—Principal Statistics of Manufacturing Industries, Classified According to Origin of Material Used, by Main Groups, Significant Years 1924-47.

<sup>1</sup> For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

**14.—Principal Statistics of Manufacturing Industries, Classified According to Origin of Material Used, by Main Groups, Significant Years 1924-47—continued.**

**Subsection 5.—Manufactures Classified by Type of Ownership**

The present study is the second on the type of ownership under which Canadian manufacturers operate. The figures for 1947 include those for the fish curing and packing industry which were not available for the 1946 study. For this reason the figures for the two years are not strictly comparable. However, the inclusion of this industry in 1946 would not have altered materially the percentage distribution of individual ownership, incorporated companies, etc.

Of the 32,734 establishments operating in 1947, 15,195 were under individual ownership, 5,280 were partnerships, 11,222 were incorporated companies and 1,037 were co-operatives. The percentage distribution of the four categories of ownership are given below for the years 1946 and 1947.

<i>Year</i>	<i>Individuals</i>	<i>Partnerships</i>	<i>Incorporated Companies</i>	<i>Co-operatives</i>
1946 (Estimated) .....	47.3	16.0	33.4	3.3
1947 .....	46.4	16.1	34.3	3.2

As is to be expected the smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. Industries carried on a small scale contain a large number of establishments in this category, the percentage decreasing as the scale of operations increase, as shown in the following statement.

<i>Group</i>	<i>Average Number of Employees per Establishment</i>	<i>Percentage of Individual Ownership Establishments to the Total</i>
Wood and paper products .....	19.1	57.8
Animal products .....	22.9	38.1
Vegetable products .....	23.9	59.0
Miscellaneous industries .....	29.4	32.2
Chemicals and allied products .....	37.3	21.0
Non-metallic mineral products .....	41.6	32.1
Textiles and textile products .....	54.7	26.3
Iron and its products .....	106.7	25.5
Non-ferrous metal products .....	120.0	21.5
ALL GROUPS .....	34.6	46.4

It is therefore found according to Table 15, that in the vegetable products group 59 p.c. of the establishments were in the above category. Wood and paper products had 58 p.c. of its establishments in this classification followed by animal products with 38 p.c., miscellaneous industries 32 p.c., non-metallic mineral products 32 p.c., textiles and textile products 26 p.c., iron and its products 26 p.c., non-ferrous metal products 22 p.c. and chemicals and allied products 21 p.c.

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to the tables 15 and 16, these establishments which comprised 46 p.c. of the total only had 8 p.c. of the total employees. Partnership accounted for 16 p.c. of the number of establishments and 5 p.c. of the total employees. Incorporated companies with 34 p.c. of the number of establishments had 87 p.c. of the employees. Co-operatives with 3 p.c. of the number had 1 p.c. of the employees.

On the basis of employment provided, incorporated companies are by a very wide margin the most important factor in the employment field. In the chemicals and allied products group 97 p.c. of the employees were reported by such companies. Companies in the non-ferrous metals group had 97 p.c., iron and its products 96 p.c., non-metallic mineral products 93 p.c., miscellaneous industries 87 p.c., textiles 86 p.c., vegetable products 83 p.c., wood and paper products 79 p.c. and animal products 77 p.c. of the total employment.

## Subsection 6.—Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1947, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

<i>Industry</i>	<i>Rank in—</i>							
	<i>1947</i>	<i>1946</i>	<i>1944</i>	<i>1939</i>	<i>1937</i>	<i>1933</i>	<i>1929</i>	<i>1922</i>
Pulp and paper.....	1	1	5	2	2	1	1	2
Slaughtering and meat packing.....	2	2	1	3	3	3	2	3
Non-ferrous metal smelting and refining.....	3	3	2	1	1	2	9	1
Sawmills.....	4	4	11	8	7	14	5	4
Electrical apparatus and supplies.....	5	7	8	9	8	16	8	17
Automobiles.....	6	9	7	5	4	11	4	6
Flour and feed mills.....	7	5	12	7	5	4	3	1
Butter and cheese.....	8	6	10	4	6	5	6	5
Petroleum products.....	9	8	14	6	9	6	10	9
Primary iron and steel.....	10	13	13	11	12	31	16	20

<sup>1</sup> Did not rank among forty leading industries in 1922.

A prominent feature of Canadian manufacturing development during the past 20 years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. With the end of the war in 1945, the industries engaged in the production of consumers goods, by reason of the heightened demand for their products, bettered their position. Pulp and paper after a lapse of a number of years resumed its premier position. A notable feature in 1947 was the advance of the primary iron and steel industry from thirteenth to tenth place, automobiles from ninth to sixth place, and electrical apparatus and supplies from seventh to fifth place. Women's factory clothing dropped from tenth to thirteenth place, flour and feed mills from fifth to seventh place, and butter and cheese from sixth to eighth place.

**20.—Principal Statistics of the Forty Leading Industries of Canada, Ranked  
According to Gross Value of Products, 1946**

<sup>1</sup> On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, synthetic textiles and silk, hosiery and knitted goods, the dyeing and finishing of textiles, narrow fabrics and cordage rope and twine, ranks first in number of employees, first in salaries and wages paid and second in gross value of production.

## Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

### Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1943 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$6,317,000,000 as compared with \$2,234,000,000 in 1917, an increase of 171 p.c. while wholesale prices have declined about 13 p.c. in the same period.

Statistics on capital employed were discontinued in 1944.

### 22.—Percentage Distribution of Capital Employed in the Manufacturing Industries, by Provinces and Industrial Groups, Significant Years, 1917-43

Statistics on capital employed are not collected since 1944.

Subsection 2.—Employment in Manufactures

**Monthly Record of Employment.**—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing

winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospect of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in August, 1943, when 1,067,890 wage-earners were employed, an increase of 96.4 p.c. over the same month in 1939. The highest employment during 1944 was attained in June when 1,049,557 wage-earners were employed. From then on employment declined steadily to the end of 1945 when 819,619 wage-earners were reported. At the end of 1947 there were 922,037 wage-earners employed. This compares with an employment of 961,820 wage-earners in December 1944 and 1,021,630 wage-earners in December 1943.

**Hours Worked by Wage-Earners.**—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1945, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Table 26 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, and reached 50.6 in 1941, some of the increase no doubt being due to the inclusion of overtime. Since then there was a counter movement in the hours worked, especially among females, due to the employment of many workers on a part-time basis. Whereas in 1939 there were only 2.8 p.c. of male and 5.3 p.c. of female wage-earners working under 30 hours per week, in 1944 these percentages rose to 5.3 and 12.5 respectively. Since the end of the war the normal working week has been dropping steadily. In 1945 average hours per week for male wage-earners totalled 47.6 and for females 42.7.

The method of collecting statistics on hours worked was changed for 1946. Instead of collecting this information for one week in the month of highest employment which varied from plant to plant, the last week in November was chosen for the base period. The question on hours worked was taken out of the annual schedules used in connection with the census of manufactures and this information is now collected by the Employment Statistics Branch. Establishments employing 15 hands or over only are covered. The statistics for 1946 and 1947 are therefore not exactly comparable with those for earlier years which include all establishments, both large and small. In 1947 average hours worked per week totalled 43.7, 44.9 for males and 39.7 for females.

## 26. Wage-Earners in Manufacturing, Working Specified Numbers of Hours<sup>1</sup> per Week in the Month of Highest Employment, 1938-45

NOTE.—Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Canada Year Book; in 1940 at p. 392 of the 1943-44 edition.

1. Includes only establishments employing 15 hands or over.

**Subsection 3. —Salaries and Wages in Manufacturing Industries**

In 1947, the 32,734 establishments covered, employed 191,100 salaried employees and 940,650 wage-earners, a total of 1,131,750 persons. Out of every 1,000 persons employed in manufacturing 169 were classed as salary earners and 831 as wage-earners; the former earned 23 p.c. and the latter 77 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76 and declined to 69 in 1947. This tendency towards equalization was, in part, due to the controls adopted by the Government during the war years which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada in 1947, 41 p.c. were found in the textile group.

The average salary in 1947 amounted to \$2,484 which was \$738 or 42.3 p.c. higher than in 1939. Salaried employees in Ontario with \$2,581 were the highest paid. Those in Quebec were second with \$2,517, British Columbia third with \$2,403, and Manitoba fourth with \$2,319. The fact that head offices of many large corporations are located in Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

# 28.—Salaries and Wages Paid in Manufacturing Industries by Provinces and Industrial Groups, 1947, with Totals for Significant Years, 1917-46

<sup>1</sup> The averages of wage-earners and earnings for the years 1931 to 1945 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

<sup>2</sup> The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

<sup>3</sup> For statistics of annual earnings of wage-earners by sex, see tables 33 and 34.

1 Average salaries and wages paid in the forty leading industries in 1946; the list of leading industries in that year was not quite the same as the list for 1947.

The average wage in 1947 amounted to \$1,713 which was \$738 or 75.7 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wage of \$1,934, followed by Ontario with \$1,792, Alberta \$1,657, Saskatchewan \$1,643, Manitoba \$1,634, Quebec \$1,601, etc. The high figures shown for Yukon and Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 28.

**Average Annual Earnings in the Forty Leading Industries.** In only five industries, bridge and structural steel, pulp and paper, breweries, automobiles, and non-ferrous metal smelting and refining, were average salaries above \$3,000 in 1947. In fifteen others they ranged between \$2,700 and \$3,000. These industries, in descending order, were: woollen cloth, primary iron and steel, men's factory clothing, petroleum products, women's factory clothing, synthetic textiles and silk, cotton yarn and cloth, automobile supplies, boxes and bags, paper, brass and copper products, railway rolling-stock, aircraft, iron castings, hosiery and knitted goods, and shipbuilding and repairs. In fifteen others they ranged between \$2,000 and \$2,700, while in the remaining five they were below \$2,000. The sawmill and butter and cheese industries with \$1,089 and \$1,454, respectively, paid the lowest salaries.

Wages, above \$2,000, were paid in ten industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The pulp and paper industry with \$2,443 was the highest in this group, followed by automobiles with \$2,337, non-ferrous metal smelting and refining \$2,218, petroleum products \$2,159, primary iron and steel \$2,149, shipbuilding and repairs \$2,149, railway rolling-stock \$2,114, aircraft \$2,100, iron castings \$2,026 and breweries \$2,023. In seventeen other industries average wages ranged between \$1,500 and \$2,000, while in the remaining thirteen they were below \$1,500. This latter group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Women's factory clothing, bread and other bakery products, men's factory clothing, hosiery and knitted goods, leather boots and shoes, fruit and vegetable preparations, and paper boxes and bags are some of the industries included in this group. Employment by sex and average annual earnings in the forty leading industries is given in Table 29.

**Average Annual, Weekly and Hourly Earnings.**— In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 28 and 29 and will be of value.

The figures for the years 1934 to 1945 given in Tables 30 to 34 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry. The figures for 1946 and 1947 are based on returns received from establishments employing 15 hands or over and refer to the last week in the month of November.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$41.35 in 1947, an increase of \$19.12 or 86.0 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 92.1 cents in 1947, an increase of 99.4 p.c. Annual earnings at \$1,909 were 77.4 p.c. higher.

Female wage-earners received on an average \$23.11 per week in 1947, an increase of \$10.33 or 80.8 p.c. Hourly earnings at 58.2 cents were 105.6 p.c. higher, while annual earnings at \$1,067 were 72.4 p.c. higher.

### 30.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, Employed in Manufacturing Industries, 1934-47

NOTE.—Butter and cheese factories and fish curing and packing plants are excluded in the years 1938 to 1945, while sawmills are also excluded in 1945. By including sawmills, weekly earnings in 1945 would have been about \$34.35 for male wage-earners.

**Real Earnings of Employees in Recent Years.**—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of “real” wages is obtained. Index numbers for 1931 to 1947 are given in Table 35. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 141.1 in 1944, an increase of about 60 p.c. In 1946 real wages dropped to 131.6 and rose again to 135.6 in 1947.

**35.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-47**

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)

**Percentages of Salaries and Wages to Net Value of Products.**—Table 36 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 173 p.c. during the period 1924-47 while wage-earners increased 125 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to \$2,761,003,901, \$1,348,114,813 or 48.8 p.c. was passed along in increased salaries and wages.

36.—Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-47

Year	Value Added by Processes of Manufacture <sup>1</sup>	Salaries Paid	Wages Paid	Percentages—

<sup>1</sup> Equivalent to "net value of products"; see footnote 1, Table 1, p. 7.

#### Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in number of employees. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale.

**Size as Measured by Gross Value of Products.** While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,376 in 1944 and their output was about 75 p.c. of the total value of manufactures. With the end of the war and the consequent decline in production of the huge war plants the number of establishments with a production of \$1,000,000 or over, although increasing to 1,442 in 1946, nevertheless saw a decline in the proportion of their output to 67 p.c. of the total.

With increased prices and an expansion in the physical volume of production in 1947, establishments with a production of \$1,000,000 or over increased to 1,716, while their contribution to the total output rose to 71.6 p.c.

**Size as Measured by Number of Employees.**—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at 25.6. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58.6 p.c. of the total, in 1929, 61.9 p.c., in 1933, 55.7 p.c., and in 1939, 61.5 p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25.6 p.c. of the total number of employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47.0. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. All told there were twelve plants employing over 7,000 persons. The largest one had an employment of a little over 13,000 with the next three largest employing between 9,000 and 10,000. Three other plants employed between 8,000 and 9,000 persons while the lowest five plants in this group employed between 7,000 and 8,000 workers.

In 1947 the size of establishment declined. The largest ones, viz. those employing 1,500 and over, numbered only 58 as compared with 100 in 1944 and 80 in 1945. The largest manufacturing plant in Canada which employed over 13,000 persons in 1944 employed about 12,000 in 1947. The next two largest establishments employed over 6,000 persons whilst the next four had over 5,000 persons. The following is the size distribution of the highest group.

Over 6,000 employees.....	3 establishments
5,000 to 6,000.....	4 establishments
4,000 to 5,000.....	5 establishments
3,000 to 4,000.....	4 establishments
1,500 to 3,000.....	42 establishments
<b>Total.....</b>	<b>58 establishments</b>

**Size of Establishment in Leading Industries.**—Table 40 summarizes the degrees of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, non-ferrous metal smelting and refining, rubber goods, cotton yarn and cloth, pulp and paper, and primary iron and steel; whereas in the case of bread and other bakery products, sawmills, miscellaneous foods, fish curing and packing, butter and cheese, and women's factory clothing, the degree of concentration is low. This concentration is analysed in detail for each of the twenty-five leading industries in the tables following.

**40.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1947**

Industry	Number of Such Establishments	Percentage of Total Number in the Industry	Percentage of Total Production in the Industry

**Subsection 5.—Power and Fuel**

**Power.**—Power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as production is increasingly dependent on power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Of course, power equipment installed is not a measure of the actual utilization of power for there is generally an excess over actual requirements, i.e., over power equipment in operation. Producers must have an installed operating margin in excess of normal requirements to provide for booming business conditions or break-down of part of the plant; in times of depression this margin increases. During short periods of expanded production, the number of horse-power per wage-earner tends to decrease in view of the fact power equipment is not immediately increased, the expanded production being secured through overtime work or an increase in the number of shifts worked. Then too, the practice in factories, etc., of installing individual motors to each machine in place of large central motors increases total installed capacity. If spare or idle machinery could be deducted from total installation over a long period of time, the resultant data would be more informative. Reports of such spare or idle equipment are available, however, only since 1934, and the percentage of equipment not in regular use has been approximately the same each year, viz., about 6 or 7 p.c. Power equipment figures, unless such deductions can be made over a long term, will not reflect temporary depressions.

Electric motors in the manufacturing industries operated by purchased power are included with primary power equipment and consequently the central electric stations producing the power are not included as manufacturing industries. Electric motors operated by power generated within these industries are not included in Table 42 with the primary power equipment that produces the power to operate them but they are shown separately, together with the total of all electric motors for each year. These totals indicate the rate of growth of electric drive in these industries in Canada, which has increased from 61.3 p.c. of the total power equipment in 1923 to 80.0 p.c. in 1947.

Of the total increase in power equipment employed in manufacturing industries since 1939, 73.7 p.c. was in electric motors operated by power purchased from central electric stations. However, some sections of Canada are not well provided with water power and in such sections primary power derived from steam engines or turbines, and internal combustion engines—which include all gasoline engines, gas engines (natural, coal, and producer gas), and compression-ignition engines—has also increased rapidly during the period covered. During the period 1939-47 there was an increase of 9 p.c. in the capacity of water wheels, 27 p.c. in the capacity of steam engines, 45 p.c. in the capacity of electric motors, while internal combustion engines almost quadrupled during the same period.

In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Saskatchewan, and Alberta, primary power produced from fuels is an important factor in power utilization.

**Fuel and Electricity.**—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement-making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 43. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers increased rapidly during the years preceding the Second World War.

The figures of the table do not include coke charged to iron-blast furnaces or foundry cupolas. Neither do they include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry.

The value of fuel consumed increased 187 p.c. from 1939 to 1947. Part of the increase was due to an increase in the quantity used and part to the rise in the unit cost of fuels of all kinds. Electricity, on the other hand, has increased during the same period by 80 p.c. The groups of industries in which fuel was most extensively used in 1947 were: iron and its products, wood and paper products, non-ferrous metals and non-metallic mineral products.

Quebec is the largest user of electric power, having used 49.5 p.c. of the Dominion total in 1947.

## PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This part of the Report is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1947 amounted to \$7,920,521,948 or 79 p.c. of the total gross value of manufactured products. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group; the latter province accounts for 19 p.c. of the gross production of that group compared with 35 p.c. for Ontario and 34 p.c. for Quebec. In each of the other groups the positions of Ontario and Quebec lead by a wide margin.

## SIZE OF MANUFACTURING ESTABLISHMENT IN EACH PROVINCE 87

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Provinces of Quebec and Ontario 37 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 34 p.c. for Canada as a whole. Nova Scotia ranked third with 32 p.c., followed by New Brunswick with 28 p.c., British Columbia 25 p.c., Manitoba 22 p.c., and Alberta 13 p.c. There were no plants in either Prince Edward Island or Saskatchewan with an employment of 500 or more persons.

### 2.—Concentration of Manufacturing Production in Each Province, 1947

## Section 1.—The Manufactures of the Maritime Provinces, 1947

In Prince Edward Island the predominant fishing and agricultural resources make fish-curing and packing and butter and cheese the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of fish-curing and packing, primary iron and steel, sawmills, shipbuilding and repairs, pulp and paper, and butter and cheese. In addition important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, while fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

<sup>1</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island—starch and glucose, castings and forgings, sheet metal products, fertilizers, cotton and jute bags and slaughtering and meatpacking; in Nova Scotia—cotton yarn and cloth, wire, coke and gas, and petroleum products; in New Brunswick—sugar refineries, railway rolling-stock, cotton yarn and cloth, synthetic textiles and silk, veneer and plywoods, breweries, shipbuilding, and brooms, brushes and mops.

## Section 2.—The Manufactures of Quebec, 1947

Quebec contributes about 30 p.c. of the total value of manufactured products of Canada. Quebec's forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going vessels to reach its main centres of population are among the assets that have tended to develop manufacturing industries. In addition, Quebec has a stable and industrious population, which is an important factor in industries such as textiles, clothing, leather boots and shoes, etc., where a large labour force is required.

The production of pulp and paper occupies the premier position, accounting for about 11 p.c. of the gross value of Quebec manufactures and about 49 p.c. of the Canadian total for this industry. Other industries in which Quebec predominates are: tobacco, cigars and cigarettes with 91 p.c. of the Dominion total; cotton yarn and cloth 70 p.c.; synthetic textiles and silk 67 p.c.; women's factory clothing 67 p.c.; leather boots and shoes 62 p.c.; men's factory clothing 59 p.c.; fur goods 49 p.c.; railway rolling-stock 48 p.c.; and hosiery and knitted goods 42 p.c. Quebec is an outstanding manufacturing province by reason of her large individual industries and not so much on account of a great diversification of manufacturing activity.

### 5.—Statistics of the Leading Industries of the Province of Quebec, 1947

Industry	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products	Gross Value of Products

NOTE.—Sugar refining is also one of the leading industries; statistics cannot be published because there are fewer than three establishments.

### Section 3.—The Manufactures of Ontario, 1947

The gross value of the manufactured products of Ontario in 1947 represented about 49 p.c. of the total for all Canada. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario has maintained a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of such United States industries as automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50.5 p.c. In 1947 the percentage dropped again to 48.6, thus indicating a relatively greater expansion of production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of automobiles, agricultural implements, starch, bicycles and carpets, are carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the 1947 Canada total are: miscellaneous non-ferrous metal products 97, abrasives 90, soaps and washing compounds 89, leather tanneries 86, rubber goods 83, cordage, rope and twine 80, woollen yarn 80, clay products from imported clay 78, primary iron and steel 76, electrical apparatus and supplies 73, aluminum products 71, salt 70, toilet preparations 61, coke and gas products 61, acids, alkalies and salts 56, flour and feed mills 54, hosiery and knitted goods 52, glass and glass products 49, and furniture 48.

\* Synthetic rubber was transferred in 1947 from the rubber industry in the vegetable products group to the miscellaneous chemical industry in the chemical products group.

## Section 4.—The Manufactures of the Prairie Provinces, 1947

The leading industries of the Prairie Provinces are those based on agricultural resources—grain-growing, cattle-raising and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other

provinces. Its natural resources of accessible water powers, forests and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1947, amounting to \$178,235,386, followed by flour and feed mills with \$119,264,565, butter and cheese \$75,351,366, and petroleum products \$57,649,999. These four industries accounted for 49 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order of importance, were: railway rolling-stock, breweries, bread and other bakery products, sawmills, printing and publishing, stock and poultry feeds, planing mills, men's factory clothing, miscellaneous foods, cotton and jute bags, etc.

### 7.—Statistics of the Leading Industries of the Prairie Provinces, 1947

<sup>1</sup> Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba, non-ferrous metal smelting and refining, pulp and paper, and bridge and structural steel; Saskatchewan, non-ferrous metal smelting and refining, cotton and jute bags, wood preservation, and vegetable oil mills; Alberta, cement, wood preservation, malt and malt products, sugar refineries, processed cheese, fertilizers, bridge and structural steel, vegetable oil mills, condensed milk, paper boxes and bags, and glass products.

## Section 5.—The Manufactures of British Columbia, 1947

British Columbia with a gross value of production of \$858,284,592 in 1947 was again the third most important manufacturing province in Canada. About 25 p.c. of that amount was contributed by the sawmilling industry followed by pulp and paper, fish processing and meat packing. Shipbuilding, which occupied first place during the war years, was in fifth place in 1947. At the height of its productive effort in 1943 it employed 31,238 persons who were paid \$61,939,484 in salaries and wages, while the value of production reached the unprecedented figure of \$155,536,396. In spite of its decline, the shipbuilding industry in 1947 was still the second largest employer of labour and also paid out the third highest amount in salaries and wages. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked first with a gross value of production of \$218,235,191, and the pulp and paper industry second with \$61,346,715. Third in importance was fish curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 54 p.c. of the total production of this industry in Canada. Other important industries are: slaughtering and meat packing, shipbuilding and repairs, fruit and vegetable preparations, fertilizers, veneer and plywood, petroleum products, butter and cheese, etc. The varied resources of the Pacific Coast have resulted in a wide diversification of its manufactures.

## 8.—Statistics of the Leading Industries of the Province of British Columbia, 1947

<sup>1</sup> Includes distilleries, non-ferrous metal smelting, vegetable oil mills, sugar refineries, and bridge and structural steel.

## Section 6.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 9, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1947 accounted for 93.8 p.c. and 92.6 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 63.3 p.c. and 59.6 p.c. respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

**9.—Cities and Towns Each with a Gross Manufacturing Production of Over \$1,000,000.  
Number of Establishments and Total Production in such Urban Centres as a  
Percentage of the Grand Total, by Provinces, 1947**

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 12, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 12 without disclosing the operations of individual establishments.

Province	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

## APPENDIX II

### Alphabetical List of the Products Reported as having been Manufactured in Canada in 1947

The appended list of the products of Canadian manufacturing industries presents the value and in most cases the quantity of the individual products in a much more detailed form. Prior to 1927, in presenting statistics of manufacturing production, the whole production of an establishment was taken as a unit. This not only prevented the presentation of production figures for specific products in detail, but also involved numerous inaccuracies in the production statistics of classes of commodities, owing to the fact that commodities which may be the major line of production in one establishment may also be products of secondary importance in another establishment where the major line of production puts the establishment into a different class. The statistics which follow, however, have been compiled by taking from the individual returns of each of the 32,734 manufacturing establishments covered, the value and, when given, the quantity of each commodity specified as produced by the establishment. In this way, detailed production figures are obtained for specific commodities and, furthermore, the total production of each commodity is brought together, no matter how varied may be the operations in different establishments producing it. Nevertheless it should be pointed out to those making use of these figures that there is one element of incompleteness about them. In the returns of many manufacturers, products of minor importance are grouped under the name "all other products". As will be seen from the group at the end of the list, the value of products not specified, while they may appear unimportant to the individual manufacturer, are, in the aggregate, a large amount, especially in the industries of the iron and steel group. It is obvious that one manufacturer may consider a product of insufficient importance to report separately for his establishment, while that same product may be reported separately by other establishments. In other words, included in the value of other products not specified at the end of the list, there are doubtless values which, had the products been specified by the manufacturer, would have been included in the values of commodities appearing on the list. However, the products not specified total only about 1.4 per cent in value of the whole manufacturing production, although in the iron and steel group this proportion is 4.6 per cent. With the exception of this group, therefore, the incompleteness of the figures on this account is insignificant.

There is no duplication in the listing of products, nor do any of the items, include products listed in more detail under another name. It is possible, however, that essentially the same commodity produced in different establishments may have been called by different names; in such a case, which is probably a very rare one, the items would appear separately in the following list.

## Alphabetical List of Products Manufactured in Canada, 1947

Products which were reported by only one or two firms and for which figures cannot be shown separately.....	—	—	384,000,054
<b>Total value of products listed.....</b>	—	—	<b>10,389,250,528</b>
Adjustments due to valuation of intermediate products, excise taxes, etc.....	—	—	308,223,948
<b>Total.....</b>			<b>10,081,026,580</b>

NOTE.—The asterisk indicates that the commodity was reported by only one or two concerns.

† Footnote for page 136: Does not include fabrics dyed or bleached by firms maintaining a dyeing and finishing department of their own.

## CANADA

### LIST OF PUBLICATIONS, CENSUS OF MANUFACTURES; 1947.

- (1) General—General Report on the Manufacturing Industries of Canada with appendix giving Alphabetical List of Products, Geographical Distribution of the Manufacturing Industries of Canada; also Reports for the Provinces and Leading Cities; Quantity of Manufacturing Production in Canada, 1923-29. Weekly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada. Monthly Report on Inventories.
- (2) Manufactures of Vegetable Products—Biennial General Report on Manufactures of Vegetable Products. Annual Bulletins as follows: (*a*) Coffee, Tea, Spices and Miscellaneous Foods; (*b*) Fruit and Vegetable Preparations, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider; (*c*) Flour and Feed Mill Products; (*d*) Bread and other Bakery Products; (*e*) Biscuits; (*f*) Confectionery, including Cocoa and Chocolate; (*g*) Macaroni, Vermicelli, etc.; (*h*) Distilled Liquors; (*i*) Breweries; (*j*) Wine; (*k*) Rubber Goods, including Rubber Boots and Shoes; (*l*) Prepared Breakfast Foods; (*m*) Sugar Refineries; (*n*) Tobacco Products; (*o*) Vegetable Oil Mills; (*p*) Canned Foods; (*q*) Ice Cream; (*r*) Pack of Fruits and Vegetables, preliminary by completed packs; (*s*) Aerated Waters; (*t*) Stock and Poultry Feeds. Quarterly Reports: (*a*) Stocks of Unmanufactured Tobacco; (*b*) Stocks of Canned Fruits and Vegetables; (*c*) Processed Foods. Monthly Reports: (*a*) Production, Consumption and Inventories of Rubber; (*b*) Production of Rubber Footwear; (*c*) Shipments and Stocks of Prepared Stock and Poultry Feeds.
- (3) Animal Products and their Manufacture—Annual Reports and Bulletins as follows: (*a*) The Dairy Factory Industry; (*b*) Processed Cheese; (*c*) Fish Processing (contained in annual Fisheries Statistics); (*d*) Slaughtering and Meat Packing and Sausage and Sausage Casings; (*e*) Leather Tanneries; (*f*) Leather Belting, Boot and Shoe Findings and Miscellaneous Leather Goods; (*g*) Leather Boots and Shoes; (*h*) Leather Gloves and Mittens; (*i*) Fur Goods, Fur Dressing. Monthly Bulletin on Leather Footwear Production.
- (4) Textiles and Allied Industries—Biennial General Report on the Textile Industries of Canada. Annual Bulletins as follows: (*a*) Cotton Textiles (cloth, yarn, thread and waste); (*b*) Woollen Textiles (cloth, yarn, waste, carpets and woollen goods, n.e.s.); (*c*) Silk and Artificial Silk; (*d*) Men's Factory Clothing incl. Men's Furnishings; (*e*) Women's Factory Clothing; (*f*) Hats and Caps; (*g*) Hosiery and Knitted Goods; (*h*) Oiled and Waterproofed Clothing; (*i*) Cordage, Rope and Twine; (*j*) Corsets; (*k*) Cotton and Jute Bags; (*l*) Dyeing and Finishing of Textiles; (*m*) Awnings, Tents and Sails. Quarterly Report on the Production of Clothing.
- (5) Manufactures of Forestry Products—Annual Reports: (*a*) Lumber; (*b*) Pulp and Paper; (*c*) Wood-Using Industries; (*d*) Planing Mills and Sash and Door Factories; (*e*) Hardwood Flooring; (*f*) Furniture; (*g*) Veneers and Plywoods; (*h*) Printing Trades (comprising the following industries, Printing

and Publishing; Printing and Bookbinding; Photographing; Engraving, Stereotyping and Electrotyping; Trade Compositions and Blue Printing); (*i*) Paper Boxes and Bags; (*j*) Roofing Paper. Specialized annual bulletins: (*a*) Lumber (series of 10 provincial summaries); (*b*) Boxes and Baskets; (*c*) Carriages, Sleighs and Vehicle Supplies; (*d*) Coaches; (*e*) Coffins and Caskets; (*f*) Boatbuilding; (*g*) Lasts, Trees and Wooden Shoe Findings; (*h*) Wood-turning; (*i*) Woodenware; (*j*) Excelsior; (*k*) Beekeepers' and Poultrymen's Supplies; (*l*) Wooden Refrigerators; (*m*) Miscellaneous Wood-Using Industries; (*n*) Miscellaneous Paper Goods. Monthly Reports; (*a*) Production, Shipments and Stocks on Hand of Sawmills East of the Rockies; (*b*) Production, Shipments and Stocks on Hand of Sawmills in British Columbia. Monthly Bulletins: (*a*) Asphalt Roofing Production and Sales; (*b*) Rigid Insulating Board Production and Sales; (*c*) Asphalt Floor Tiles Production and Sales.

- (6) Iron and Steel and their Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry. (*a*) Primary Iron and Steel; (*b*) Iron Castings; (*c*) Heating and Cooking Apparatus (except boilers and radiators); (*d*) Boilers, Tanks and Plate Work; (*e*) Farm Implements and Machinery; (*f*) Machinery; (*g*) Automobiles; (*h*) Automobile Parts; (*i*) Bicycles; (*j*) Railway Rolling Stock; (*k*) Wire and Wire Goods; (*l*) Sheet Metal Products; (*m*) Hardware, Tools and Cutlery; (*n*) Bridge Building and Structural Steel Work; (*o*) Shipbuilding and Ship Repairs; (*p*) Aircraft; (*q*) Miscellaneous Iron and Steel Products. Commodity Bulletins on Washing Machines; Cream Separators; Warm Air Furnaces; Stoves, etc. Monthly Bulletins: (*a*) Pig Iron, Steel Ingots and Castings; (*b*) Steel Ingots; (*c*) Motor Vehicle Shipments; (*d*) Domestic Washing Machines; (*e*) Wire Nails; (*f*) Steel Wire; (*g*) Wire Fencing; (*h*) Primary Iron and Steel.
- (7) Manufactures of Non-Ferrous Metals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (*a*) Aluminium Products; (*b*) Brass and Copper Products; (*c*) White Metal Alloys; (*d*) Jewellery and Silverware; (*e*) Electrical Apparatus and Supplies; (*f*) Non-Ferrous Metal Smelting and Refining; (*g*) Miscellaneous Non-Ferrous Metal Goods. Monthly Reports on: (*a*) Sales of Radio Sets; (*b*) Sales of Storage Batteries; (*c*) Domestic Electric Refrigerators; (*d*) Dealers' Report on Non-Ferrous Scrap Metal; (*e*) Ingot Makers' Monthly Report. Commodity Bulletins on the Production of Vacuum Cleaners; Specified Electrical Appliances and Domestic Electric Refrigerators.
- (8) Manufactures of the Non-metallic Minerals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals: (*a*) Asbestos Products; (*b*) Cement; (*c*) Cement Products; (*d*) Coke and Gas; (*e*) Glass Products; (*f*) Lime; (*g*) Petroleum Products; (*h*) Clay Products; (*i*) Salt; (*j*) Sand-lime Brick; (*k*) Stone; (*l*) Artificial Abrasives; (*m*) Gypsum and Gypsum Products; (*n*) Miscellaneous Non-Metallic Mineral Products, including Carbon Electrodes—Mica Products—Non-Metallic Minerals, n.e.s. Also Special Reports on: (*a*) The Consumption of Coke in Canada; (*b*) Consumption of Petroleum Fuels in Canada; (*c*) Sales of Lubricating Oils in Canada. Monthly bulletins on: (*a*) Coal and Coke Statistics; (*b*) Sales of Manufactured and Natural Gas; (*c*) Rock Wool Sales; (*d*) Gypsum Products; (*e*) Concrete Blocks and Concrete Pipe; (*f*) Refined Petroleum Products.

- (9) Chemicals and Allied Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products: (a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints and Varnishes; (g) Soaps, Cleaning Preparations and Washing Compounds; (h) Toilet Preparations; (i) Inks; (j) Adhesives; (k) Polishes and Dressings; (l) Primary Plastics; (m) Miscellaneous Chemical Products, including Boiler Compounds; Insecticides; Sweeping Compounds; Hardwood Distillation; Disinfectants; Matches; Dyes and Colours; Explosives, ammunition and fireworks; Chemical Products, n.e.s. Special Reports on the Fertilizer Trade in Canada. Monthly Report on Sales of Paints, Varnishes and Lacquers. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada. Special Report on the Consumption of Chemicals in Municipal Waterworks. Special Report on Sales of Pest Control Products.
- (10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses; (e) Sporting Goods.
